***Canadians' Perspectives on Climate Change &
Education: 2022***
Quebec Provincial Report

Section 1: Introduction

Climate Change and Education Context

Climate change is one of the most complex and wide-reaching challenges facing humankind today. According to a 2022 report published by the Intergovernmental Panel on Climate Change (IPCC), the planet has already passed a number of crucial tipping points, and some effects of climate change are already irreversible. Canada has seen a significant increase in climate-related disasters over the past decade and urgent action is necessary using the best data available to ensure that Canadians will successfully adapt and prosper.

Climate Change Education and Policy

The important contribution of the education sector in responding to climate change is recognized globally. According to UNESCO, 95 percent of the 194 reporting countries have included climate change education as part of their national action plans on climate change. However, this pledge has not yet resulted in subsequent curriculum change, as almost half of the curriculum frameworks from 100 countries contain no climate change content, and furthermore, implementation is not consistent. Across Canada, only 6 of 13 provinces and territories have included climate and sustainability in their curricular documents or education policy. In addition, provincial curriculum seldom emphasizes climate change's current and projected impact, mitigation and adaptation strategies, and the scientific consensus on climate science.

Impacts on Youth and the Significance of Youth Action

It is essential to provide youth with accurate scientific knowledge and strategies to address climate change to promote a sustainable mindset and build a climate-resilient socioeconomic system. Integrating climate education across subjects and tying together inequality, citizenship, Indigenous stewardship and discussions of systematic change will foster an informed citizenry and empower students to use their voices and advocate for change in their communities. Engaging youth in environmental issues within their communities is but one starting point to further encourage them to undertake collective action through policy, activism, and network building. Yet youth cannot tackle the climate crisis on their own – they require the commitment of previous generations to right cumulative wrongs and change the course of the future. Formal and informal education of all Canadians is key to achieving success in the fight against climate change.

Survey Background

As the effects of climate change become increasingly more severe, the sense of urgency to act to mitigate and adapt to climate change is also mounting. Moving Canada toward resiliency and adaptability for climate impacts today and in the future will require support, education, and action at all levels of Canadian society.

The report *Canadians' Perspectives on Climate Change & Education: 2022* provides results from a national climate change education survey undertaken by Learning for a Sustainable Future (LSF) and Leger Research Intelligence Group. The survey gathered data from across Canada on different groups' knowledge of climate change and its risks, and their views on the role of schools in climate change education.

This *Quebec Provincial Report* provides the highlights from the full national report and gives additional results based on further analysis of Quebec data. The findings presented here help to gain an understanding of trends over time and current perspectives of educators, students, parents and the general public in 2022. With this knowledge, recommendations based on evidence can be made to fill in gaps, promote strengths, and address misperceptions in order to implement the most effective strategies to support all Canadians in their efforts to combat climate change.

Acknowledgements

We recognize that the lands we live, work, teach and learn from are the traditional territories of Indigenous peoples and that all Canadians benefit from this land. We recognize the importance of Indigenous perspectives and connections to land and place as we work towards reconciliation to address the Calls to Action of the Truth and Reconciliation Commission.

This survey is a follow-up to a climate change education survey that was undertaken in 2019 by Dr. Ellen Field at Lakehead University (with funding from SSHRC), Learning for a Sustainable Future and Leger. The 2022 survey design and data analysis was led by Pamela Schwartzberg, Learning for a Sustainable Future President and CEO; Jennifer Stevens, LSF Manager of Learning, Research and Communication, and LSF consultants Dr. Karen Acton and Dr. Susan Elliott. Leger Research Intelligence Group provided data collection and analysis. Elaine Rubinoff, LSF Director of Programs, and Samantha Gawron, Manager of Programs, Engagement & Development provided survey promotion.

Thank you to the Canadian Teachers' Federation and many other teacher organizations, as well as LSF's communication partners for circulating the survey to their members. We would also like to thank the 406 educators, 1,373 parents, 1,208 students and 1,290 members of the general public who participated in the Leger panel, and the 1,237 educators, 462 parents, 586 students and 391 members of the general public who participated through the open survey link on the LSF site.

We would like to thank the Government of Canada for their financial support.

Methodology

Population Segmentation

For this survey, the following populations were identified:

- Educators – public and private K-12/cégep teachers, educational assistants, department heads, curriculum leads and curriculum consultants, vice-principals, principals, and district leaders
- Students – includes current students from grades 7 to 12/cégep
- Parents – includes parents of students in K-12/cégep
- General Public – includes participants who do not identify as educators, students, or parents.

Recruitment Procedures

Leger Research Intelligence Group provided data collection and analysis on behalf of Learning for a Sustainable Future (LSF). Leger panelists received an email invitation to complete the survey with a unique link for each respondent. All respondents from the Leger panel (LEO) are referred to as “panel”. From the Leger Web Survey, a total of 4,035 Canadians were surveyed in English and French. This report contains the results for the “panel” data.

Due to the limits of the LEO platform to survey the desired 1000 educators, the survey relied on a multi-sampling approach where additional responses were collected through convenience and snowball sampling through an open survey link hosted on LSF’s website. Many teacher affiliations and education-related organizations assisted with the promotion of the survey through their provincial and territorial networks.

Data Collection and Analysis

As part of the analysis process, the data are weighted by age, gender and province (based on Statistics Canada proportions) to ensure that data are representative of the Canadian public and reflective of Canadian opinion. Demographic data is presented in its unweighted form.

From the sample that was collected through the LSF open-link, a total of 2,461 completed surveys were received from November 9, 2021 to March 6, 2022. The supplemental open-link data was used where Leger panel data was insufficient, and was thus only needed to augment the educator respondent data for SK, MB and ATL in the provincial reports.

See the methodology section of the full national report for further details.

Canadians' Perspectives on Climate Change & Education: 2022 **Quebec Provincial Report**

Section 2: What has changed since 2019?

Overall Climate Change Knowledge

Respondents were asked 10 climate change questions early in the survey, to test their knowledge and understanding. Each question had a correct answer. The number of correct responses per respondent group and province/region are shown on the following slide, and responses from selected questions are shown on subsequent slides. Below are the 10 questions respondents were asked, with the answers in bold:

- B1. Do you think climate change is...
- Caused mostly by human activities**
 - Caused mostly by natural changes in the environment
 - About equally caused by both human activities and natural changes
 - Not happening
 - Don't know
 - Other (please specify)
- B2. Which comes closest to your own view?
- Most climate scientists think climate change is happening**
 - Most climate scientists do not think climate change is happening
 - There is a lot of disagreement among climate scientists about whether climate change is happening or not
 - Don't know enough to say
- B3. Climate change is caused by....
- Emissions from nuclear power plants
 - Thinning of the ozone layer
 - Particulate air pollution
 - Carbon dioxide and other greenhouse gases**
 - Industrial chemicals
 - Natural variability
 - Unsure
- B4. The main process behind climate change is...
- Letting more of the sun's heat into the Earth's atmosphere through a thinner ozone layer
 - An increase in gases in the Earth's atmosphere that trap heat**
 - An increase in solar activity
 - Particulate pollution in the air reflecting heat back to Earth
 - Unsure
- B5. Canada, as an Arctic nation, is particularly affected by the impacts of climate change
- True**
 - False
 - Unsure
- B6. Canada's average temperature has _____ since 1948.
- Decreased by 1 – 1.5 degrees Celsius
 - Decreased by 1 – 0.5 degrees Celsius
 - Decreased by 0.5 – 0 degrees Celsius
 - Stayed the same
 - Increased by 0 – 0.5 degrees Celsius
 - Increased by 0.5 – 1 degrees Celsius
 - Increased by 1 – 1.5 degrees Celsius**
 - Unsure
- B7. What sector is currently the largest greenhouse gas emitter in Canada?
- Agriculture
 - Heavy industry
 - Electricity
 - Buildings
 - Oil and gas**
 - Transportation**
 - Waste
 - Unsure
- B8. In the next 20 years, Canadian winters are predicted to be colder and to have more snow.
- True
 - False**
 - Unsure
- B9. At what minimum temperature change does scientific consensus predict global warming will result in major consequences to health, livelihoods, food security, water supply, and economic growth?
- 0 degrees Celsius
 - 0.5 degrees Celsius
 - 1 degree Celsius
 - 1.5 degrees Celsius**
 - 2 degrees Celsius
 - 2.5 degrees Celsius
 - Don't know
- B10. What do countries need to do in order to ensure temperatures stay within the range that the Earth system can tolerate?
- Significantly increase emissions
 - Moderately increase emissions
 - Do nothing
 - Moderately decrease emissions
 - Significantly decrease emissions**
 - Move to net zero emissions** Don't know

Overall Climate Change Knowledge

Total Correct Answers

0-4 correct 5-7 correct 8-10 correct

Total Correct Answers – Respondent Group

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
2019: n=2,191 (Educator=111, Parent=571, Student=486, General Public=908)

Total Correct Answers – Province/Region

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
2019: n=2,191 (BC=196, AB=160, SK=73, MB=70, ON=749, QC=814, ATL=118)

Overall climate change knowledge has increased since 2019, as more Canadians passed the 10 question climate change test embedded in the survey (67% passed in 2022 vs. 57% 2019).

Furthermore, significantly more educators passed with over 80% in 2022 vs. 2019 (33% vs. 10%), as did parents (19% vs. 12%), students (19% vs. 10%), and the general public (20% vs. 16%).

Climate change knowledge has also increased regionally across Canada with the majority showing improvement on the climate change knowledge test. Significantly fewer failed in AB, SK, MB and ON.

Furthermore, significantly more respondents were able to answer 8 or more questions correctly in BC SK, MB, ON, QC and in ATL. While AB and SK have improved, their scores remain lower than the rest of Canada.

Do you think climate change is...

Total

A majority of respondents were correct in their thinking that climate change is caused mostly by human activities. More respondents in 2022 answered correctly (54%) than in 2019 (46%), which is fairly consistent across most respondent groups. Parents showed the largest gains (55% in 2022 vs. 43% in 2019). However, slightly fewer educators answered correctly in 2022 (57%) than in 2019 (60%).

Notably, a proportion (35%) still think climate change is equally caused by both human activities and natural changes, although this number has decreased since 2019 (41%).

Respondent Group

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,188 (Educator=111, Parent=571, Student=484, General Public=907)

Caused mostly by human activities (correct)

Province	2019	2022	(+/-)
BC	47%	59%	+12
AB	28%	40%	+12
SK	29%	41%	+12
MB	39%	50%	+11
ON	46%	55%	+9
QC	57%	60%	+3
ATL	51%	44%	-7

The percentage of respondents who were able to answer this question correctly in 2022 increased across all regions compared to 2019, other than in ATL.

Correct responses increased from +3 percentage points in QC to +12 percentage points in BC, AB, and SK between 2019 and 2022.

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 2019: n=2,188 (BC=196, AB=160, SK=73, MB=70, ON=748, QC=812, ATL=118)

Which comes closest to your own view?

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,189 (Educator=110, Parent=571, Student=486, General Public=907)

A majority of respondents hold the correct belief that most climate scientists think climate change is happening. Slightly more respondents hold this view in 2022 (76%) than did in 2019 (72%).

Similarly, more respondents from each respondent group in 2022 hold this view, than did in 2019. The largest increase in correct responses from 2019 to 2022 was seen in educators and students, with an increase of +7 percentage points.

Most climate scientists think climate change is happening (correct)			
Province	2019	2022	(+/-)
BC	78%	79%	+1
AB	61%	73%	+12
SK	52%	73%	+21
MB	70%	70%	-
ON	70%	76%	+6
QC	81%	77%	-4
ATL	67%	77%	+10

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 2019: n=2,188 (BC=196, AB=160, SK=73, MB=70, ON=749, QC=812, ATL=118)

The percentage of respondents who were able to answer this question correctly in 2022 increased across all regions compared to 2019, except for QC, which decreased by 4 percentage points, and MB which stayed consistent with 2019 answers.

Correct responses increased from +1 percentage points in BC to +21 percentage points SK.

Climate change is caused by...

In terms of understanding the scientific causes of climate change, just over half (55%) of respondents in 2022 answered correctly, that carbon dioxide and other greenhouse gases are the primary cause of climate change, compared with less than half (49%) in 2019.

Educators showed the largest increase in correct answers to this question (65% vs. 48%). Parents remained the most 'unsure' with only half choosing the correct response.

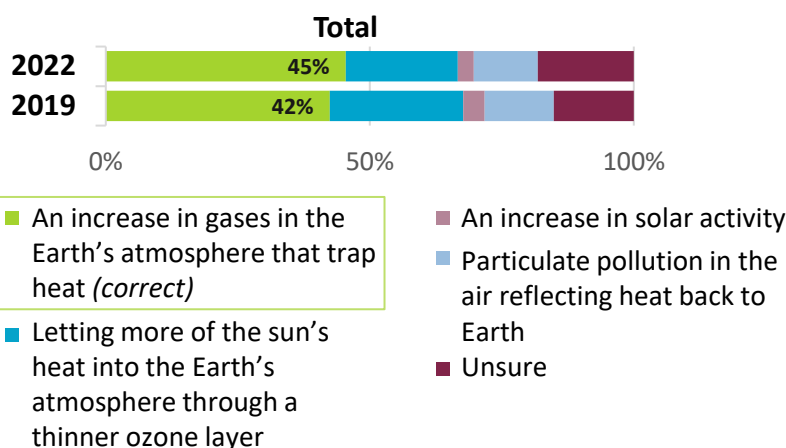

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
2019: n=2,191 (Educator=111, Parent=571, Student=486, General Public=908)

Province	Carbon Dioxide and other greenhouse gases (correct)		
	2019	2022	(+/-)
BC	52%	58%	+6
AB	44%	48%	+4
SK	34%	52%	+18
MB	49%	60%	+11
ON	48%	52%	+4
QC	55%	64%	+9
ATL	49%	46%	-3

The percentage of correct answers to the cause of climate change increased for respondents in all provinces aside from those in ATL.

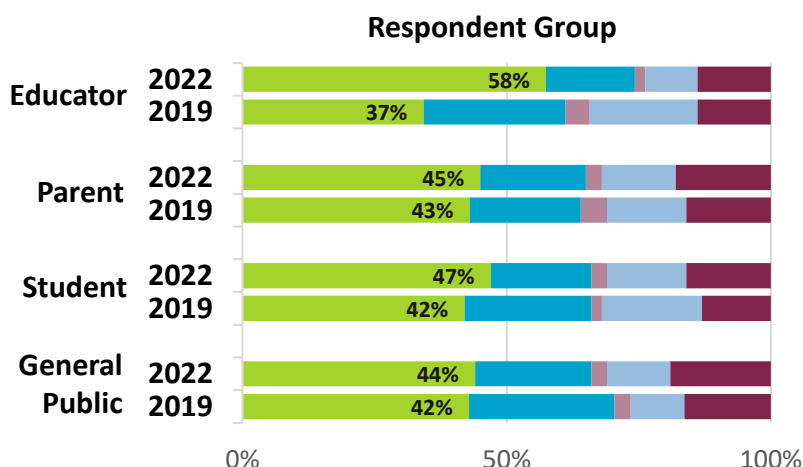

SK had the largest increase in correct responses from 2019 to 2022, with significantly more respondents in SK answering this question correctly in 2022 (52%) than in 2019 (34%).

The main process behind climate change is...

Less than half of all respondents were able to answer correctly that the main process behind climate change is an increase in gases in the Earth's atmosphere that trap heat. The percent of correct answers increased slightly from 2019 (42%) to 2022 (45%).

While all respondent groups showed gains in answering correctly in 2022, educators showed the most improvement in understanding the main process behind climate change (58% in 2022 vs. 37% in 2019).

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,184 (Educator=110, Parent=571, Student=486, General Public=903)

An increase in gases in the Earth's atmosphere that trap heat (*correct*)

Province	2019	2022	(+/-)
BC	48%	45%	-3
AB	43%	45%	+2
SK	25%	38%	+13
MB	38%	43%	+5
ON	41%	44%	+3
QC	46%	51%	+5
ATL	39%	42%	+3

The percentage of respondents who answered this climate change question correctly increased for respondents in all provinces aside from those in BC.

Correct responses increased from +2 percentage points in AB to +13 percentage points in SK between 2019 and 2022.

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 2019: n=2,184 (BC=195, AB=160, SK=73, MB=69, ON=748, QC=810, ATL=118)

In the next 20 years, Canadian winters are predicted to be colder and to have more snow

Total

Respondent Group

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,190 (Educator=111, Parent=571, Student=486, General Public=907)

When asked if in the next 20 years, Canadian winters are predicted to be colder and to have more snow, less than half of all respondents answered correctly that the statement was false. Slightly more respondents in 2022 (46%) answered correctly than did in 2019 (41%). Over one-quarter of all respondents remained unsure.

Correct responses increased across all respondent groups other than in the general public, where correct responses stayed consistent between 2022 and 2019 (45%). Significantly more students and educators correctly answered that this question in 2022 (both groups up by 12 percentage points).

False (correct)

Province	2019	2022	(+/-)
BC	38%	37%	-1
AB	43%	42%	-1
SK	37%	42%	+5
MB	35%	42%	+7
ON	41%	43%	+2
QC	45%	58%	+13
ATL	41%	48%	+7

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 2019: n=2,187 (BC=196, AB=160, SK=73, MB=70, ON=749, QC=813, ATL=118)

The percentage of correct responses increased across all regions other than BC and AB where correct responses in these two provinces each dropped by 1 percentage point from 2019 to 2022.

Correct responses increased from +2 percentage points in ON to +13 in QC from 2019 to 2022.

What do countries need to do in order to ensure temperatures stay within a tolerable range?

	Total	% Correct
2022	41% 34%	75%
2019	50% 36%	73%

- Significantly Decrease Emissions
 - Move to Net Zero Emissions
- % Correct** (Significantly decrease emissions **or** move to net zero emissions)

		Respondent Group	% Correct
Educator	2022	41% 38%	79%
	2019	53% 42%	76%
Parent	2022	45% 31%	76%
	2019	51% 36%	73%
Student	2022	45% 30%	76%
	2019	46% 31%	65%
General Public	2022	40% 34%	74%
	2019	51% 36%	74%

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,189 (Educator=111, Parent=571, Student=486, General Public=906)

When asked what countries need to do to ensure temperatures stay within a tolerable range, about three-quarters of respondents were able to answer correctly, that countries should either significantly decrease emissions or move to net zero emissions. Responses were similar but slightly improved in 2022 (75%) compared to 2019 (73%).

Correct responses increased across all respondent groups other than the general public, where correct responses stayed consistent between 2022 and 2019 (74%). Students had the largest increase in correct responses from 2019 (65%) to 2022 (76%).

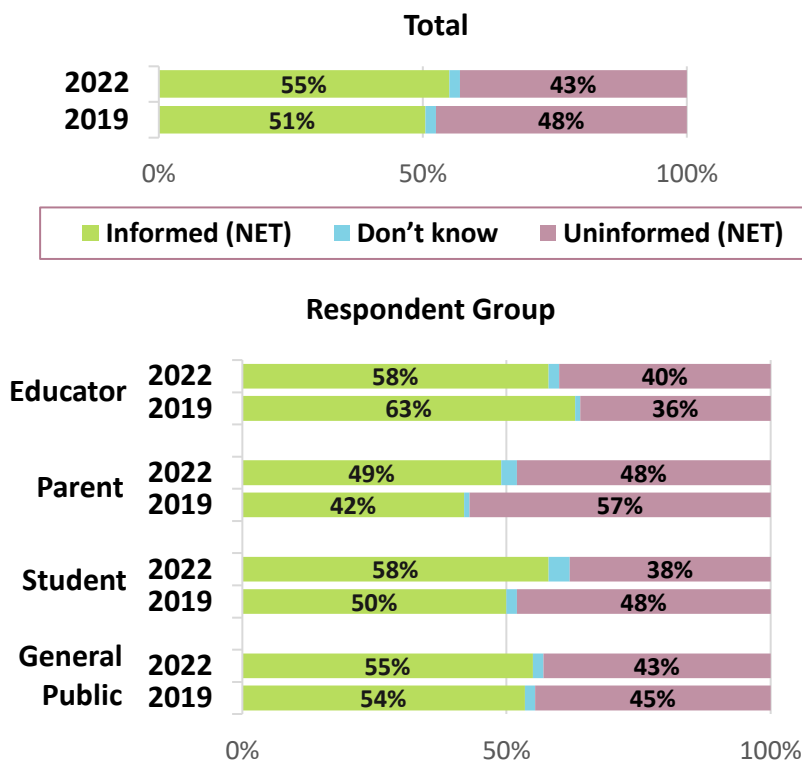

% Correct (Significantly decrease emissions or move to net zero emissions)			
Province	2019	2022	(+/-)
BC	71%	76%	+5
AB	64%	65%	+1
SK	60%	70%	+10
MB	74%	66%	-8
ON	74%	76%	+2
QC	82%	78%	-4
ATL	68%	75%	+7

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 2019: n=2,188 (BC=196, AB=160, SK=73, MB=70, ON=748, QC=812, ATL=118)

The percentage of correct responses varied across all province/regions from 2019 to 2022. Most had an increase in correct responses, however in MB and QC correct responses decreased by -8 to -4 percentage points, respectively.

Correct responses increased from +1 percentage points in AB to +10 in SK from 2019 to 2022.

How well-informed do you feel you are about climate change?

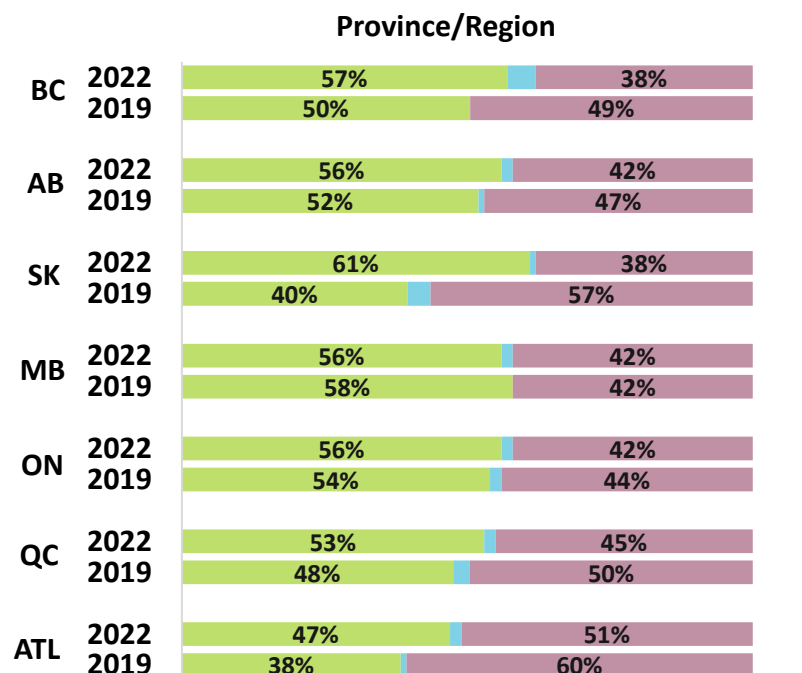

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,188 (Educator=110, Parent=571, Student=485, General Public=907)

Most respondents (55%) in 2022 felt they were well-informed (very well-informed/fairly well-informed) about climate change, more than in 2019 (51%).

Parents (49%), students (58%), and the general public (55%) indicated feeling more well-informed in 2022 than in 2019 (42%, 50%, 54%, respectively).

Educators were the only group to feel less informed in 2022 than in 2019 (58% vs. 63% in 2019).

All respondents in provinces across Canada, other than in MB, indicated feeling more well-informed in 2022 than in 2019.

Those in SK felt the most well-informed (61%) in 2022, a significant increase from 2019 (40%). Residents in ATL felt the least well-informed (47%) in 2022, however still notably more than in 2019 (38%).

Climate change education should be a high priority for schooling

Agree (NET)– Total

Agree (NET)– Respondent Group

2022: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 2019: n=2,179 (Educator=111, Parent=570, Student=479, General Public=906)

Agree (NET)- Province/Region

■ 2022
 ■ 2019

2022: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 2019: n=2,179 (BC=196, AB=160, SK=73, MB=70, ON=743, QC=809, ATL=117)

Education is becoming a higher priority for Canadians. When asked if climate change should be a high priority for schooling, more respondents agreed in 2022 (67%) than in 2019 (59%).

Parents (64% vs. 53%), Students (66% vs. 57%) and the general public (67% vs. 60%) agreed significantly more in 2022 than they did in 2019.

Similarly, when asked if climate change education should be a high priority for schooling, a majority of respondents in 2022 across all regions in Canada agreed. Those in AB (58% vs. 49%), SK (59% vs. 33%), MB (66% vs. 52%), ON (70% vs. 58%), and those in ATL (71% vs. 47%) agreed significantly more than they did in 2019.

Notably, QC is the only region that decreased in agreement from 2019 to 2022.

In 2022, respondents in AB (58%) and SK (59%) agreed less than other provinces.

Section 3: What do Canadians think of Climate Change in 2022?

- **Part 1: Knowledge Questions**
- **Part 2: Effects and Action**
- **Part 3: Climate Change Education**
- **Part 4: Teaching Climate Change**

Part 1: Climate Change Perspectives and Knowledge

Part 1 assesses respondent knowledge, understanding, and perspectives on the cause, impact, and reality of climate change.

I am certain that climate change is happening.

The overwhelming majority of Canadians acknowledge that climate change is a reality. When respondents were asked if they are certain that climate change is happening, 81% of respondents nationally, indicated they did agree (strongly agreed/agreed) with this statement. Significantly more QC residents were likely to agree (85%).

Students in QC were significantly more likely than students nationally to agree they are certain climate change is happening (91% in QC vs. 82% nationally). Responses were fairly comparable across other respondent groups.

Respondent Group

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

Provinces across Canada are in similar agreement, with a majority being certain that climate change is happening.

Regional agreement ranges from 85% in QC to 78% in AB and MB.

We are experiencing a climate emergency

A large majority of Canadians believe that the climate change situation we are facing is extremely urgent. Close to three quarters of respondents (73% nationally, and even more so, 77% in QC) were in agreement that we are currently experiencing a climate emergency.

Students in QC are significantly more likely than students nationally (87% in QC vs. 72% nationally) to agree we are currently experiencing a climate emergency. Parents in QC are also more likely than parents nationally to agree (76% in QC vs. 71% nationally).

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

While most provinces are in agreement that we are experiencing a climate emergency, respondents in MB (79%), BC (77%), QC (77%) and ON (74%), are more likely to agree than those living in AB (60%), SK (72%) and ATL (67%).

Do you think climate change is...

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)

When asked whether climate change is human-caused, 54% of respondents nationally, and significantly more respondents in QC (60%), answered correctly.

Around one-third however, believed that climate change is equally caused by both human activities and natural changes (35% nationally, 30% in QC).

Significantly more parents, students, and members of the general public in QC than those nationally, answered correctly, that climate change is mostly human-caused (parents: 61% in QC vs. 55% nationally, students: 74% in QC vs. 60% nationally, general public: 59% in QC vs. 52% nationally). Educator responses in QC were fairly consistent with responses nationally.

The understanding and acceptance that climate change is human-caused, varies across regions. Those in BC (59%), ON (55%), and QC (60%) understand and agree that climate change is mostly caused by human activities, more than those in AB (40%), SK (41%), ATL (44%), and MB (50%).

Similarly, a notable percentage of respondent's across all regions indicated that climate change is equally caused by both human activities and natural changes.

Climate change is caused by...

Respondent Group

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 4% or less not labelled.

Province/Region

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)

In terms of understanding the scientific causes of climate change, just over half of respondents nationally (55%) answered correctly, that carbon dioxide and other greenhouse gases are the primary cause of climate change. Significantly more respondents in Quebec answered correctly (64%).

However, a notable portion of respondents were 'unsure' of the cause of climate change (13% nationally and 12% in QC) or incorrectly believed that climate change is caused by the thinning of the ozone layer (12% nationally and 10% in QC).

Quebec respondents tended to answer this question correctly more often than nationally. Parent (56% in QC vs. 50% nationally), students (61% in QC vs. 54% nationally), and even more among the general public (65% in QC vs. 54% nationally). Educator responses in QC were fairly consistent with responses nationally.

Across provinces, there is a variation in the knowledge that carbon dioxide and other greenhouse gases are the principal cause of climate change ranging from 46% in ATL up to 64% in QC.

A notable portion of respondents on average, are unsure of the cause of climate change or responded that climate change is caused by the thinning of the ozone layer.

Number of correct answers to knowledge statements

On average, 67% of respondents nationally answered 5 or more of the climate change knowledge questions correctly. Significantly more respondents in QC answered over 5 of the questions correctly (74%).

Across all respondent groups, QC was more likely to answer 5 or more questions correctly compared to nationally. Educator responses were the most similar to the national average. Students scored particularly well on this knowledge test in QC (80% vs. 65% nationally), followed by members of the general public (74% in QC vs. 67% nationally), and then parents (72% in QC vs. 63% nationally).

Respondent Group

National: $n=4,035$ (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: $n=1,168$ (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 4% or less not labelled.

Province/Region

QC outperformed every other province/region in Canada on the 10-question knowledge test. Provinces ranged between a 60% (AB and SK) to 74% (QC) success rate in answering 5 or more of the questions correctly.

For the over 80% success rate, QC also scored the highest with 25% of respondents getting 8 to 10 questions correct, followed closely by ON (22%). AB (15%) and SK (12%) had the fewest residents answering 8 or more questions correctly.

How much information do you feel you need about climate change to form an opinion?

■ Need more information (NET)
■ Don't know
■ Do not need more information

Respondent Group

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 4% or less not labelled.

Province/Region

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL.=300)
 Responses 4% or less not labelled.

A large majority of Canadians would like more information about climate change. 80% of respondents nationally indicate they feel they need more information (a lot more, some more, a little more) about climate change to form a firm opinion. Significantly more respondents in QC (86%) indicated they feel they need more information about climate change.

Students and members of the general public in QC were significantly more likely than those nationally to feel they need more information about climate change to form an opinion (92% vs. 85%, 88% vs. 80%, respectively).

Provinces across Canada indicate they feel they need more information about climate change to form a firm opinion/

Respondents in QC were significantly more likely to indicate they need more information (86%), compared to respondents living in BC (77%), AB (76%), and ON (79%).

Which of the following do you use to inform yourself about climate change?

2022 Total

Television News Programs

National: **51%**

QC: **58%**

Newspaper/Online News Websites

National: **47%**

QC: **50%**

Documentaries or Movies

National: **42%**

QC: **43%**

Conversing with Friends/Family

National: **35%**

QC: **28%**

Radio News Programs

National: **22%**

QC: **29%**

When asked which sources respondents use most to inform themselves about climate change, significantly more respondents in QC (58%) than nationally (51%) indicated television news programs. Slightly more respondents in QC also indicated newspapers/online news sites (50% in QC, 47% nationally), watching documentaries or movies (43% in QC, 42% nationally) and listening to radio news programs (29% in QC vs. 22% nationally).

Note: Respondent group and provincial data can be viewed on the following page.

Students nationally and in QC are most likely to use various social media platforms to inform themselves about climate change (53% in QC and 51% nationally) however, after social media, the second most common information source differs nationally vs. in QC. Students in QC are more likely to inform themselves about climate change through newspaper/online news websites (41% in QC vs. 33% nationally) and documentaries or movies (44% in QC vs. 34% nationally). Educators in QC are also more likely than educators nationally to watch documentaries or movies about climate change (54% in QC vs. 44% nationally). Regionally, using social media platforms is most common in BC (42%). Television news programs were more common in BC (51%), ON (53%), QC (58%) and ATL (52%) than in AB (36%). Using documentaries or movies were more common in BC (46%), and AB (44%) than in MB (28%).

Top 6 responses shown.

Part 2: Climate Change Effects and Actions

Part 2 highlights respondent knowledge, understanding, and perspective on the impact of climate change and actions that can be taken.

I have personally experienced the effects of climate change

Over one third (36%) of respondents nationally, agree (strongly agree/agree) they have personally experienced the effects of climate change. Significantly less respondents in QC agree (23%).

Educators, parents, students, and members of the general public in QC are significantly less likely than those groups nationally to agree that they have personally felt the effects of climate change

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

Regionally, with regards to having personally experienced the effects of climate change, respondents in BC (51%) agree the most.

Those living in QC are the least likely to agree (23%).

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)

What do Canadians think in 2022?

Over two-in-five (44%) respondents nationally, and less in QC (40%), have the personal view that humans could reduce climate change but that it is unclear at this point whether we will do what is needed. This personal view is followed by the view held by about one-third (31% nationally and 32% in QC) of respondents who believe that humans could reduce climate change, but that people aren't willing to change their behaviours so we aren't going to.

Educators in QC (38%) are significantly less likely than educators nationally (53%) to believe that humans could reduce climate change but that it is unclear at this point whether we will do what is needed. The general public in QC is much more likely to agree that humans aren't willing to change their behaviour to reduce climate change (43% in QC vs. 30% nationally).

Those in MB (57%) are significantly more likely to believe that humans could reduce climate change but that it is unclear whether we will do what is needed than those in QC (40%).

Those in BC (34%), ON (32%), and QC (32%) are significantly more likely to believe than those in MB (19%), that humans could reduce climate change, but that people aren't willing to change their behaviours so we aren't going.

Would you be willing to change your life to help reduce the effects of climate change?

A large majority of respondents nationally (72%) would be willing to change their life either “a lot” or “some” to help reduce the effects of climate change. Significantly more respondents in QC (78%) would be willing to somewhat/a lot. Only 6% of respondents nationally, and even fewer in QC (4%) are not at all willing to change their life at school, work, or home.

Educator responses in QC were fairly consistent with responses nationally. However, all other respondent groups in QC are more likely to be willing to change their lives (“a lot” or “some”). Parents (75% in QC and 70% nationally), students (75% in QC vs. 68% nationally), and members of the general public (78% in QC vs. 70% nationally).

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 6% or less not labelled.

Respondents across the provinces in Canada were also willing to take “some” action to help reduce the effects of climate change, ranging from 54% in QC to 36% in MB.

Those in BC (31%), were more willing to take “a lot” of action than those in other provinces, especially compared to AB (15%).

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)
 Responses 5% or less not labelled.

* Indicates rounding

New technologies can solve climate change without individuals having to make big changes in their lives

Few respondents nationally (28%) agree (strongly agree/agree) that new technologies can solve climate change without individuals having to make big changes in their lives. Significantly less respondents in QC (24%) agree.

Students in QC (22%) are significantly less likely than students nationally (32%) to agree new technologies can solve climate change without individuals having to make big changes. QC responses from educators, parents, and members of the general public are fairly consistent with responses nationally.

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

Regionally, respondents differed in their belief that new technologies can solve climate change.

Those living in AB (40%) were significantly more likely to believe in technology as a solution without sacrifices needing to be made, than those in BC (23%), ATL (23%), QC (24%), and MB (26%).

Personal actions are important, but systemic change is required to address climate challenges

Respondent Group

Most respondents feel individual efforts must be supported by a whole-system response to mitigate the effects of rising temperatures. A majority of respondents (78% nationally and even more so, 81% in QC) agreed that while personal actions are important, systemic change is required to address climate challenges.

Students in QC (83%) are significantly more likely than students nationally (77%) to agree personal actions are important, but systemic change is required to address climate change. Significantly more educators are not sure in QC than educators nationally (14% vs. 5%).

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

Similarly, respondents across the provinces in Canada agreed that systemic change is needed.

Agreement ranged from 82% in SK to 73% in MB with QC showing the second highest agreement at 81%

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)

The government is doing a good job in their actions to address climate change

Quebec respondents, like most Canadians, are not satisfied with the actions the government is taking to mitigate the effects of a warming planet. Very few respondents (17%) agreed (strongly agree/agree) that the government is doing a good job in their actions to address climate change.

Dissatisfaction with the job the government is doing was fairly consistent across respondent groups. Educators in QC were more likely to respond that they don't know (18%) compared to national respondents (7%).

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 4% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

Similarly, there are few respondents across Canada who agree the government is doing a good job. Regional responses range from 13% agreement in MB to 20% in BC. QC fell in the middle at 17%.

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL=300)

* Indicates rounding

Please elaborate on what you feel needs to be done to address climate change

Survey respondents were given the opportunity to answer this open-ended question in their own words. Out of the survey population, 722 individuals in QC chose to answer this optional question.

The results were coded and grouped according to themes. The 7 most common themes are shown below and indicate suggestions for lifestyle changes to reduce carbon footprint, reduced consumptions and waste, and working together among other suggestions to address climate change.

1

Reduce carbon footprint/lifestyle change to become more environmentally friendly
21%

"Reducing greenhouse gases through lifestyle changes." (Member of the General Public)

2

Reduce consumption of products/reduce waste
17%

"Reduce our consumption of all goods...buy local as much as possible, have the compost bin for everyone..." (Member of the General Public)

3

Everybody must do their share
11%

"We all need to take small, simple actions every day to limit global warming." (Student)

4

Government legislation/regulations/action
11%

"The government must lead by example by bringing about important and big changes..." (Parent)

5

Carbon tax/penalize polluters
10%

"The carbon tax is necessary and should be mandatory for all industrialized countries." (Educator)

6

Cooperation/responsibility from industries/companies
9%

"The big industries should make the big changes. They should reduce their greenhouse gas emissions, adopt so-called green ways of working, reduce their waste and pollution they cause." (Student)

7

Move to electric/hybrid vehicles
9%

"Accelerate the trend towards electric or hybrid vehicles..." (Parent)

The work and voices of young people can inspire important climate action

Many Canadians are counting on our youth to help win the fight against global warming. The majority (69%) of respondents nationally and in QC (71%) agreed that the work and voices of young people can inspire important climate action.

Students in QC (80%) are significantly more likely than students nationally (72%) to agree the work and voices of young people can inspire important climate action. QC educators are much less likely to “strongly agree” with this statement (23%) compared to national educators (34%).

Agreement across parents and members of the general public in QC are consistent with national responses.

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 6% or less not labelled.

Province/Region - % Agree (Strongly Agree/Agree)

A majority of respondents across various provinces in Canada agree with this statement, ranging from 72% of those in ATL to 63% in SK. QC respondents agree almost as highly as ATL respondents (71%).

When you think about climate change, what main emotions or feelings arise?

Feelings on Climate Change – Respondent Group

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)

QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)

Responses 8% or less not labelled.

Feelings on Climate Change - Province/Region

National: n=4,035 (BC=514, AB=467, SK=217, MB=241, ON=1,025, QC=1,168, ATL.=300)

Responses 8% or less not labelled

When QC respondents were asked to think about climate change and the emotions or feelings that arise when they do, anxiety (36%) was the top response, similar to respondents nationally (37%). This was followed by feeling both frightened (24%) and frustrated (24%). Respondents nationally were significantly more likely to feel frustrated (35%). QC respondents are less hopeful overall compared to nationally (19% in QC vs. 25% nationally). Few respondents are feeling unconcerned in QC (9%) and nationally (10%).

Similarly, anxiety was the top response felt by parents, students, and members of the general public in QC. Students in QC were the most likely to feel frightened (38%), more so than their national counterparts (32%), and more than educators, parents, and the general public.

Respondents in QC are the least likely to feel frustrated (24%). Respondents in BC (45%) are significantly more likely to feel anxious about climate change than those in MB (31%), ON (36%), and QC (36%). SK respondents are most likely to feel frustrated (51%). Residents in BC have the highest combined negative feelings while those in AB and QC have the lowest.

Those in QC (14%) are significantly more likely to feel confident about climate change. 16% of those in AB feel unconcerned, which is significantly more than those in SK (6%), ON (9%), and QC (9%).

Part 3: Climate Change Education

Part 3 highlights respondent's opinions and perspectives of climate change education in schools.

Should education systems do more, less, or about the same as now to educate young people about climate change?

Many Canadians understand the importance of education in the fight against climate change, as 64% nationally and even more so, 69% in QC indicated they think that 'a lot more' should be done to educate young people.

Students in QC were significantly more likely than those nationally to indicate education systems should do a lot more to educate young people about climate change (75% in QC vs. 60% nationally). Parents tend to agree more in QC too (68% in QC vs. 61% nationally).

Respondent Group

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)
 Responses 5% or less not labelled.

Province/Region

Across Canada, the majority of respondents think the education system should be doing more to educate about climate change. QC responses had the highest levels of support for the school system doing more to educate young people about climate change (69%) and AB had the lowest (58%).

To what extent do you agree (or disagree) with the following on teaching climate change in schools?

% Agree (Strongly Agree/Agree)– Total

National Total QC Total

Climate change education should aim to change the way people behave.	75%	78%
Climate change education should be a high priority for schooling.	67%	66%
Climate change education should be the role of all teachers.	61%	62%
Only one 'side' of the climate change debate should be taught (it is happening, and humans are the cause).	31%	34%
The topic of climate change is too complex and should not be discussed in younger grades.	15%	13%
It is not the role of schools to teach students about climate change.	13%	12%

National: n=4,035 (Educator=406, Parent=1,373, Student=1,208, General Public=1,290)
 QC: n=1,168 (Educator=130, Parent=424, Student=344, General Public=337)

Most respondents agreed that climate change education should aim to change the way people behave (75% nationally and 78% in QC).

Very few Canadians and Quebecois agreed (15% nationally and 13% in QC) that the topic of climate change is too complex and should not be discussed in younger grades. Even less agreed (13% nationally and 12% in QC) that it is not the role of the school to teach students about climate change.

Perceptions of teaching climate change in schools varies regionally. QC had the highest agreement (78%) that climate change should aim to change the way people behave, and the second highest agreement (34%) that only one "side" of the debate should be taught (it is happening and humans are the cause).

% Agree (Strongly Agree/Agree)– Province/Region

To what extent do you feel that the Kindergarten to Grade 12 classes should focus on the following?

% Agree (Somewhat more/A lot more)

QC responses overall are fairly consistent with the national average overall. Most respondents agree that Kindergarten to Grade 12 classes should focus on how to take individual climate action in the school and community, and the science behind the climate change.

Note: Respondent group and provincial data can be viewed on the following page. Parents in QC are less likely than parents nationally to think the science behind climate change should be taught somewhat more/a lot more (66% in QC vs. 72% nationally) as are students in QC (59% in QC vs. 70% nationally). Parents in QC are also less likely to think the social, economic, and political elements of climate change should be taught (55% in QC vs. 61% nationally).

Across Canada, the province that most strongly believed that school should focus on the science of climate change was ON (76%). The regions that were the least likely to believe in a focus on the social, economic, & political elements of climate change were QC (58%) and ATL (56%).

To what extent do you feel that the Kindergarten to Grade 12 classes should focus on the following?

Respondent Group

How do you think education systems should further contribute to climate change education?

Survey respondents were given the opportunity to answer this open-ended question in their own words. Out of the survey population, 632 individuals from QC chose to answer this optional question.

The results were coded and grouped according to themes. The 7 most common themes are shown below, and indicate suggestions for an enhanced curriculum, increased awareness, and a solution-based approach.

1

Include with curriculum in school
33%

"Integrating climate change into the science curriculum but also using it as the backdrop when talking about other subjects to show the vast impact of climate change on people and systems around the world." (Parent)

2

Offer solutions to the problem (e.g., reduce your carbon footprint, less pollution)
15%

"Make sure that schools are doing everything they can to reduce their footprint and get children involved in helping them do so." (Parent)

3

Make people aware of consequences to their actions
13%

"Tell us the consequences for our future generations." (Student)

4

Explain scientific evidence of what causes climate change
13%

"Teachers should be better trained to base their teaching on scientific facts." (Parent)

5

Empower individuals so they feel they can make a difference
9%

"Show them what they can do individually" (Parent)

6

Reduce waste/consume less
9%

"Encourage children to recycle and compost waste. Explain overconsumption." (Parent)

7

Educate people more/ Increase awareness
8%

"Offer courses on this subject, plan awareness-raising activities with young people." (Member of the General Public)

Part 4: Teaching Climate Change

Part 4 highlights the results from the portion of the survey **designed exclusively for educators**. This section includes their perspectives on the issues that impact the teaching of climate change. 406 Educators responded to the survey with representation from each province across Canada.

What barriers have you experienced when attempting to include climate change education within your classroom?

Barriers when attempting to include climate change education within the classroom

Educators both nationally (50%) and in QC (48%) reported that a lack of time within the course/grade to teach the topic of climate change is the top barrier when attempting to include climate change education within their classrooms. Educators in QC are significantly less likely than educators nationally to mention a lack of professional development opportunities (28% in QC vs. 40% nationally). Educators in QC are also less likely to report being unsure of instructional strategies compared to the national average (13% in QC vs. 19% nationally).

Educators from QC do not feel that lack of accurate information sources (19%) are a barrier compared to BC (48%), AB (32%) and ON (22%). QC (38%) and AB (34%) educators were less likely to have a lack of classroom resources compared to BC (53%) and ON (52%).

Province/Region

Total National Responses less than 10% not shown.

* Indicates open-link data; regional data has been grouped according to the method of sampling in the tables for comparison purposes.

To what extent do you agree/disagree with the following statements?

% Agree (Strongly Agree/Agree)

National: n=306
QC: n=109

Educators expressed the need for professional development (64% nationally, 63% in QC) to feel comfortable teaching climate change but over half (52% nationally, 51% in QC) did express confidence teaching the controversial issues involved in this subject matter. Nationally, only one-third (34%) agreed that they had the knowledge and skills to teach climate change education to their student however teachers in QC feel much less confident (25%).

Regionally, responses were quite varied. Educators in BC of climate change education were significantly different compared to their counterparts in AB, especially in their need for PD (89% in BC vs. 40% in AB) and confidence in teaching sensitive issues (65% in BC vs. 34% in AB). QC responses fell in the middle of the provincial variation.

% Agree - Province/Region

	BC	AB	ON	QC	ATL*	SK*	MB*

What support do you need to teach climate change?

Top 6 “Things” Needed to Teach Climate Change

National: n=306
QC: n=109
Top 6 Responses Shown.

Some survey topics were included in more than one question to confirm findings. Again, educators substantiated that one of the most needed items is climate change resources (56% nationally, 54% in QC). Educators nationally were more likely to believe that professional development opportunities on teaching climate change are needed (52% nationally and in 42% in QC). QC educators are significantly less likely to indicate the need for a school-wide culture that promotes climate change education (36% nationally vs. 23% in QC).

QC educators were less likely to request the supports listed compared to other provinces, except resources. BC educators were most likely to request a school wide culture to support climate change (50%), and ON was most likely to want strategies on outdoor learning (40%).

Province/Region

	BC	AB	ON	QC		ATL*	SK*	MB*

To what extent do you agree (or disagree) that climate change should be addressed in grades Kindergarten to Grade 3?

% Agree (Strongly Agree/Agree)

National: n=406
QC: n=130

Educators highly agreed that green energy (73% nationally, 75% in QC) and extreme weather (70% nationally, 72% in QC) should be addressed in Kindergarten to Grade 3. QC educators were significantly more likely to agree that over-consumption should be addressed (77% in QC vs. 66% nationally).

There was lower agreement for the inclusion of topics like social and racial inequities (38% nationally, 42% in QC), eco-anxiety/threats to mental health (37% nationally and slightly higher, 43% in QC), and peaceful dissent/protests (31% nationally, 34% in QC).

Regionally, QC (77%) ranked over-consumption highest. ON (72%) and BC (67%) ranked teaching green energy highest, and AB (70%) ranked biodiversity highest.

Province/Region

	BC	AB	ON	QC		ATL*	SK*	MB*
Green energy	67%	63%	72%	75%		85%	82%	82%

When I teach about climate change...

A Great Deal/ A Moderate Amount

Half of educators both nationally (51%) and in QC (50%) encourage students to take action as part of their learning a great deal/a moderate amount when teaching about climate change. Many (41% nationally, 45% in QC) also taught media literacy.

Overall, educators are less likely to teach students to cope with the emotions that arise when learning about climate change (15% in QC vs. 18% nationally), and discuss potential career opportunities related to mitigation and adaptation (12% in QC vs. 17% nationally).

Educators from QC (11%) were the least likely to include Indigenous traditional knowledge about climate change, as compared to their counterparts in AB (26%) who were the most likely.

National: n=306

QC: n=109

Province/Region

	BC	AB	ON	QC	ATL*	SK*	MB*
I encourage students to take action as part of their learning	45%	30%	60%	50%	66%	66%	66%
I teach critical media literacy so students can make the distinction between fact and opinion	41%	26%	45%	45%	45%	66%	42%
I include solutions to climate change	40%	26%	42%	41%	56%	59%	58%
I primarily focus on teaching climate change science	25%	27%	38%	32%	42%	59%	36%
I include the social, economic & political elements of climate change	31%	28%	30%	29%	35%	38%	35%
I emphasize aspects of ethics and social justice within climate change impacts	25%	16%	27%	22%	32%	34%	39%
I teach students strategies to cope with emotions that arise when learning about climate change	12%	18%	24%	15%	19%	28%	23%
I discuss potential career opportunities related to climate change mitigation or adaptation	23%	16%	21%	12%	27%	28%	13%
I include Indigenous traditional knowledge about climate change	13%	26%	20%	11%	19%	48%	29%

In my classes...

% Agree (Strongly Agree/Agree)

Educator responses from QC are fairly consistent with responses nationally. Half of educators both nationally (55%) and in QC (50%) agreed that they emphasize the scientific consensus that climate change is caused by human release of greenhouse gases from fossil fuels in their classes. Educators in QC were slightly less likely to agree that they emphasize that average global temperatures have risen in the past 150 years (48% in QC vs. 54% nationally).

QC responses fell in the middle of the regional variation for most statements. Educators from AB were least likely to agree with all statements, except for emphasizing that some scientists believe that recent increases in temperature are likely due to natural causes.

National: n=306
QC: n=109

Province/Region

	BC	AB	ON	QC		ATL*	SK*	MB*
I emphasize the scientific consensus that climate change is caused by human release of greenhouse gases from fossil fuels	73%	37%	60%	50%		69%	79%	67%
I emphasize that average global temperatures have risen in the past 150 years	71%	39%	59%	48%		64%	79%	63%
I encourage students to come to their own conclusions about the causes of climate change	37%	39%	53%	46%		39%	34%	41%
I encourage students to debate the likely causes of climate change	50%	34%	44%	48%		33%	45%	43%
I focus on political actions that can be taken to influence climate change policy	43%	16%	34%	32%		42%	52%	40%
I emphasize that some scientists believe that recent increases in temperature are likely due to natural causes	34%	37%	29%	27%		16%	24%	23%

National: Educators (BC=40, AB=35, SK=29, MB=175, ON=81, QC=109, ATL=156)

* Indicates open-link data; regional data has been grouped according to the method of sampling in the tables for comparison purposes.

How frequently do you engage students in taking the following types of actions to address climate change?

Educators most frequently engaged students in actions to make lifestyle/consumer choices (65% nationally and in QC) and to educate and inform others (64% nationally, 65% in QC).

QC educators were less likely than educators nationally to engage in raising funds (10% in QC vs. 17% nationally) or peaceful dissent (14% in QC vs. 19% nationally).

Educators from AB engage students in all actions that address climate change less frequently than those from BC, ON or QC. Educators in BC (71%) and ON (70%) are the most likely to engage students in making lifestyle/consumer choices. QC educators were the least likely to engage in raising funds.

Province/Region

	BC	AB	ON	QC		ATL*	SK*	MB*

Canadians' Perspectives on Climate Change & Education: 2022 Quebec Provincial Report

Section 4: Climate Audiences

Ladder of Engagement

The group EcoAnalytics has been mapping Canadian public opinion on climate change since 2016. As well, they have been providing additional analysis on specific segmented audiences in order to provide insights for communicators, educators, and policymakers for better targeting and engagement. Within this body of work, EcoAnalytics has put forward a Canadian ladder of engagement, which is a conceptual map to help groups engage audiences with more success (LaChappelle, Mahéo, & Nadeau, 2016).

The four audiences are broadly categorized and paraphrased from the EcoAnalytics report as:

- **Dismissive** - disagree that climate change is happening
- **Skeptic** - agree that climate change is happening and do not think it's caused by humans OR, neither agree nor disagree that climate change is happening
- **Aware** - agree that climate change is happening and do think it's caused by humans AND indicated that there is nothing that we can do to change it
- **Empowered** - agree that climate change is happening and do think it's caused by humans AND indicated that there are things we can do to change it

Below is a comparison of the QC Ladder of Engagement Results to the National Results:

The majority of respondents both nationally and in QC are either Empowered or Aware, meaning they do agree that climate change is happening and that it is caused by humans.

Parents in QC are significantly less likely than parents nationally to be Skeptic (11% vs. 15%) as are students (8% in QC vs. 13% nationally). Students in QC are also significantly more likely to be Empowered (49% vs. 39%).

National: n=4,025 (Educator=404, Parent=1,368, Student=1,207, General Public=1,288)

QC: n=1168 (Educator=130, Parents=424, Student=344, General Public=337)

Responses 4% or less not labelled.

**Ten respondents were excluded from reporting as they belonged to both the Dismissive and the Skeptic category, their responses were not consistent with their views towards climate change.*

Ladder of Engagement 2022 vs. 2019

■ Empowered
 ■ Aware
 ■ Skeptic
 ■ Dismissive

Respondent Group

2022: n=4,025 (Educator=404, Parent=1,368, Student=1,207, General Public=1,288)

2019: n=3,196 (Educator=111, Parents=571, Student=486, General Public=908)

Responses less than 4% not labelled.

In three of the four participant groups (educators, parents and general public), there was little change in the ladder of engagement in 2022 vs. 2019, with educators remaining the most empowered (47% vs. 46%) and parents feeling the least empowered (39% vs 38%).

This lack of movement in other groups made the change in the student results much more significant. The percentage of students feeling “empowered” in 2019 was 28%. However, this number rose to 39% in 2022, meaning more students felt that human-caused climate change is happening, and that there are things we can do to change it.

Province/Region

When the ladder of engagement is applied regionally, most provinces are largely either empowered and aware. In 2022 in some regions (BC, AB, ON, QC, and ATL) there were fewer respondents in the empowered group than in 2019. SK, however, showed significant gains in the empowered group in 2022 vs. 2019 (38% vs. 28%).

2022: n=4,025 (BC=513, AB=464, SK=217, MB=240, ON=1,021, QC=1,168, ATL=299)

2019: n=2,180 (BC=196, AB=160, SK=73, MB=70, ON=749, QC=814, ATL=118)

Responses 4% or less not labelled.

Canadians' Perspectives on Climate Change & Education: 2022
Quebec Provincial Report

Section 5: Recommendations

Recommendations

The analysis of the survey data revealed a series of opportunities to strengthen climate change education in Canada, both in formal and informal education settings. Overall, Canadians wish to be better informed about climate change. In addition, educators call for enhanced professional learning and resources.

The following recommendations provide a roadmap for governments, policymakers, universities, school boards, teachers' unions, community organizations, corporations, educators, and youth to address the importance of climate change education and recognize the urgency of acting now.

Formal Education

- Ministries of Education should revise curricula to incorporate climate change expectations across all subjects and in all grades, from kindergarten to grade 12 and seek input from:
 - youth
 - Indigenous educators
 - marginalized communities
- Curriculum expectations should include: scientific consensus that climate change is human caused, the social, economic, and political aspects of climate change, Indigenous knowledge, and social justice issues.
- Ministries of Education, school boards, and teachers' unions should provide professional development and resources to enhance teacher knowledge, skills, and confidence in teaching climate change. and should include transformative pedagogies such as inquiry, active learning, and hands-on, experiential learning.
- Teachers must be supported to include solutions to mitigating and adapting to the effects of climate change, and promote student action to foster feelings of hope and empowerment and ameliorate emotions brought about by climate change.
- Faculties of Education, in implementing the *Accord on Education for a Sustainable Future* adopted by the Association of Canadian Deans of Education in 2022 should highlight the urgency of climate change education. They must ensure that climate change education is a central and required component of course offerings in pre-service, in-service, and graduate-level teacher education curricula

Recommendations

Informal and Non-Formal Education

- Canadians should be provided with information, from trusted sources including scientists and academics, about the process and causes of climate change, opportunities for mitigation and adaptation, and personal, higher-impact actions.
- Sources of information about climate change need to target different population groups more purposefully and effectively.
- Informal education sources should provide resources and strategies to help parents, grandparents, children, and youth cope with emotions that arise when learning about climate change, with a focus on solutions, actions, and hope.
- Canadians should hear positive stories of climate action and learn about collaborative approaches that create systemic change.
- Informal education sources should provide resources and professional learning for teachers on current national/provincial climate data, information on green jobs, and locally relevant climate change classroom resources.

In summary, the results of the climate change survey emphasized the need for enhanced climate change education, both in the formal school setting, as well as through informal education channels. Using this two-pronged, targeted approach will help to reduce climate change knowledge gaps and work towards the positive outcome of active citizenship for all Canadians.

*Climate change mitigation and adaption will require **education**, support, action, and empowerment at ALL levels of Canadian society.*
